Classification of Wetlands of Bangladesh

Final Report

The Final Report on 'Classification of Wetlands of Bangladesh', submitted in December, 2016 contains the following volumes:

- Volume 1: Main Report
- Volume 2: Annexure 1: Rivers of Bangladesh
- Volume 3: Annexure 2: Haors of Bangladesh**
- Volume 4: Annexure 3: Maps of Wetlands of Bangladesh
- Volume 5: Annexure 4: Beels of Bangladesh
 - Annexure 5: Reversible Wetlands
 - 5A: List of Polders of Bangladesh
 - 5B: List of FCD projects of Bangladesh
 - Annexure 6: Biodiversity of Wetlands of Bangladesh
 - 6A: Plants of Inland Wetlands
 - 6B: Plants of Sundarbans Mangrove Forest
 - 6C: Plants of Tanguar Haor
 - 6D: Birds of Tanguar Haor
 - 6E: Animals of Tanguar Haor
 - 6F: Freshwater Fishes of Bangladesh
- Volume 6: Supporting Documents
 - Annexure 7: Feedback from the Stakeholders
 - Annexure 8: TOR of the Project
- Volume 7: Annexure 9: Soil of Wetlands of Bangladesh
- Volume 8: Annexure 10: Wetland Photo Gallery

Preface

This Volume (Volume 3) contains the “Annexure 2: Haors of Bangladesh” of the Final Report on “Classification of Wetlands of Bangladesh”.

Haors are special type of **Inland Wetlands** of Bangladesh situated in the north-eastern zone of the country. They are freshwater (seasonal) inland lakes. Considering the importance of Haor in the national economy as well as of its hydrological characteristics and very rich biodiversity, it was felt necessary to prepare a separate volume of the report, exclusively dealing with Haors.

This Annexure includes the name, location and map (district and Upazila wise) of all the 373 Haors as identified in the “Master Plan of Haor Area” (BHWDB, 2012). The Annexure has been prepared by extracting data from the “Master Plan of Haor Area” as well as the data acquired during the preparation of the said “Master Plan of Haor Area”.

We deeply acknowledge the “Department of Bangladesh Haor and Wetlands Development (DBHWD)” and the “Center for Environmental and Geographic Information Services (CEGIS)” for developing a comprehensive Master Plan of Haor area. We are thankful to the CEGIS for helping us to formulate the Report including this Annexure. We acknowledge the Water Resources Planning Organization (WARPO) for providing data and maps from the National Water Resources Data (NWRD) Base.

We are grateful to the Technical Committee of this project for their support and guidance. We are thankful to Mr. Md. Majibur Rahman, Director General, DBHWD and Mrs. Afroza Moazzam, former Director General of the DBHWD for their active support and co-operation.

We appreciate the co-operation of Mr. Md. Nurul Amin, Director (Admin and Finance), DBHWD and Mr. Mohammad Nazmul Ahsan, Project Director, DBHWD. We thank the local people of the Haor Region who in various ways helped the study team for better understanding of the conditions and challenges of the study area as well as acquiring data on flora and fauna of the Haor Region.

Box 1.1: Classification System of Wetlands of Bangladesh	5
Box 1.2: Ramsar Criteria for the Designation of Wetlands of International Importance	11

Chapter 1 Introduction

1.1 Background

Haors are bowl-shaped depressions of considerable aerial extent lying between the natural levees of rivers or high lands of the northeast region of Bangladesh. In most cases, Haors have formed as a result of peripheral faulting leading to the depression of haor areas (BHWDB, 2012). There are 373 Haors in Bangladesh as identified in the “Master Plan of Haor Area” (BHWDB, 2012).

The “Department of Bangladesh Haor and Wetlands Development” (the then “Bangladesh Haor and Wetland Development Board”) through the “Center for Environmental and Geographic Information Services (CEGIS)” has prepared the “Master Plan of Haor Area” (BHWDB, 2012). This Annexure has been prepared mainly with the data extracted from the Master Plan. It includes District and Upazila wise list of all the Haors along with their location, area and maps. Furthermore, it includes short description of some important Haors and Beels within the Haors.

The word Haor (হাওর) is a corrupt form of the Sanskrit word “Sagor” meaning sea. In parts of Bangladesh, people often pronounce the Bengali alphabet স (Sa) as হ (Ha), and sometimes গ (Ga) as হ (Ha). Thus, “Sagor” has become Haor (Shamsul et al., 2012). The origin of Haors is possibly connected with the rise of Madhupur Tract (Shamsul et al., 2012). There are about 373 Haors located in the districts of Sunamganj, Habiganj, Netrakona, Kishoreganj, Sylhet, Maulvibazar and Brahmanbaria covering 1.99 million ha of area and having population of 19.37 million (BHWDB, 2012). The Haors vary in size from a few hectares to several thousand hectares and cover an area of 858,000 ha which is about 43% of the total area of the Haor Region. The core Haor Region, known as the “Sylhet Basin” or “Haor Basin” is bounded by the hill ranges of India – Meghalaya on the north, Tripura and Mizoram on the south, and Assam and Manipur on the east. The basin extends north to the foot of the Garo and Khasia Hills, and east along the upper Surma Valley to the Indian border (BHWDB, 2012).

The Surma and Kushiyara in association with other minor hilly streams like Manu, Khowai, Jadhukata, Piyain, etc. form the dense drainage network of the Haors draining from the

eastern border towards the Sylhet Basin. Between the Surma and Kushiyara, there lies a complex basin area comprised of several Haors. Most of the Surma system falls in the Haor basin, where the line of drainage is not clear or well defined. In the piedmont tract from Durgapur to Jaintiapur, the network of streams and channels overflows in the rainy season and creates vast sheets of water which connect the Haors with the rivers (BHWDB, 2012).

The Haor Region is gradually becoming a popular tourist spot in Bangladesh for its beauty. At the end of the monsoons, around August-September, the Haors are full with water attracting tourists from all over the country and abroad. Thereafter, the water in the Haors starts receding but still provides a magnificent sight. In winter, the Haors and Beels receive thousands of migratory birds. It is the ideal season for bird-watchers. As summer sets in the Haors, most of the water has drained out but one can still see numerous Beels, which act as sanctuary for mother fisheries.

1.2 Beels within Haors

Beels are shallow lakes, which form in the lowest parts of the Haor. Normally, the Haors are full of water in the wet season and they dry up during winter. But there remains some deep pockets within the Haors that do not dry up even in the winter. These deep points within the Haors are known as Beels within Haor area. Beels are sustained from groundwater to a large extent. These Beels act as mother fishery. The Beels of Haor Basin (Sylhet Basin) area are smaller in size. According to the National Water Management Plan (NWMP, 2004), in the Haor Basin, there are some 6,300 Beels of varying size, out of which about 3,500 are permanent and 2,800 are seasonal (WARPO, 2004).

1.3 Importance of Haors

Haors are considered as the most productive wetland resources of Bangladesh. They provide livelihood for thousands of people through subsistence and commercial fisheries. The seasonally flooded lake margins provide ideal condition for Boro rice cultivation (BHWDB, 2012). The Haor Basin supports a rich variety of bio-diversity and acts as a natural reservoir. Thousands of migratory birds visit this region every year attracting tourists in the winter. The

Region is considered as one of the most fascinating and beautiful places in Bangladesh. It is estimated that the Haor Region has contributed on average around 2% of the national GDP with the average worth of BDT 37,740 million over the last decade (BHWDB, 2004).

1.3.1 Economy

Agriculture and fisheries are the main base of the diversified economic resources of the area. The major cropping patterns in the Haor Region are rice based and almost all segments of cultivated lands are used for at least one rice crop a year. About 16% of the total rice area of Bangladesh falls in this Region. Boro rice or dry season rice is the main crop grown in here. The aquatic vegetation grown here provides a rich grazing for domestic livestock. Various herbs and aquatic plants are being used for alternative sources of fuel and fertilizer by the local people.

Fish culture is an important economic practice in the Haor area. Many fishermen depend on fishing as their only means of earning. Haors are rich in aquatic bio-diversity, particularly in diverse fish species. The Haor Region comprises a wide variety of fin fish including 143 indigenous and 12 exotic species along with several species of freshwater prawns. Tangar Haor is characterized by approximately 141 fish species including some exotic introduced species which represents more than half of the country's fresh water fish species (BHWDB, 2012). Among these species are Air, Gang Magur, Baim, Tara Baim, Gutum, Gulsha, Tengra, Titna, Garia, Beti, Kakia etc. Overfishing and habitat destruction as well as sedimentation in rivers, canals and waterbodies creates disturbance in the local ecology in terms of disruption of fish breeding cycles and migration routes, which leads to reduction of fish population. As a result, many species are facing danger of extinction. The nearly extinct enlisted species comprises Nandina, Angrot, Pangus, Tor Mohasol, Baghayre etc. Some fish species which are at risk of extinction include Chital, Raik/Lasu, Ghonia, Rani, Kani Pabda, Madhu Pabda, Kajuli/Banshpata, Telo Taki And Kuchia (BHWDB, 2012).

1.3.2 Flora and Fauna

Through gradual sedimentation from the tributaries of the Meghna River, the Haor Basin has become shallower and fertile. As a result, various wetland plants like reeds and sedges grow

which provide food and shelter for fish and other aquatic fauna, resulting in a vast variety of wetland bio-diversity. Due to continuous submergence, wetland habitat is characterized by anaerobic conditions which inhibits normal plant growth apart from a group of plants known as hydrophytes. Flood tolerant plant species like the hijal or hual, korij or koroch, bhui dumur, nol, khagra, ban golap and barun are mainly found in the swamp forests (IUCN, 2002).

One of the most important feature of Haor Region is that they are sanctuaries for both permanent and migratory birds. A large variety of small fishes, oysters, water snails and bivalves, and pasture spread over the surface attracting a large number of migratory birds. They use the Haor basin as their resting and roosting ground attracting tourists from all over the country and thus making the Haor Region a popular tourist spot. They also contribute to the process of eutrophication by adding fertility to the waterbodies by their excreta promoting rich growth of phytoplankton and macrophytes. The “Master Plan of Haor Area” estimated that about 208 species of birds live or visit Bangladesh. Among the birds 30% are waterfowls, 26% waders, 20% bush and her bland birds and the rest are grassland, air hawking prey. Of these fresh water birds 129 species (62.3%) are resident and the other are migratory. The list of extinct wetland birds include spotbill pelican, pelican, scavenger vulture, Bengal florican, pink headed duck, greater adjutant and king vulture. There are several endangered species also (Jamal, 2007).

1.4 Wetland Type

According to proposed classification system of Wetlands of Bangladesh shown in Box 1.1, Haors are Inland Wetlands. There are 2 classes namely permanent and non-permanent. The permanent portion of the Haors are called Beels within Haors. According to the classification these Beels within the Haors are of BO type wetlands. The seasonal Haors are of BP type of wetlands.

Box 1.1 Classification System of Wetlands of Bangladesh

Systems	Classes	Types Symbols	Name of wetland types
Marine/Coastal Wetlands	Permanent	BA	Permanent shallow marine waters in most cases less than six metres deep at low tide; includes sea bays and straits
		BB	Marine subtidal aquatic beds; includes kelp beds, sea-grass beds, tropical marine meadows
		BC	Coral Reefs
		BF	Estuarine waters; permanent water of estuaries and estuarine systems of deltas
	Non-Permanent	BE	Sand, shingle or pebble shores; includes sand bars, spits and sandy islets; includes dune
		BG	Intertidal mud, sand or salt flats
		BI	Intertidal forested wetlands; includes mangrove swamps, nipah swamps and tidal freshwater swamp forests
Inland Wetlands	Permanent	BL	Permanent inland deltas
		BM	Permanent rivers/streams/creeks; includes waterfalls
		BO	Permanent freshwater lakes (over 8 ha); includes large oxbow lakes
		BTP	Permanent freshwater marshes/pools; ponds (below 8 ha), marshes and swamps on inorganic soils; with emergent vegetation water-logged for at least most of the growing season
	Non-Permanent	BN	Seasonal/intermittent/irregular rivers/streams/creeks
		BP	Seasonal/intermittent freshwater lakes (over 8 ha); includes floodplain lakes
		BTS	Seasonal/intermittent freshwater marshes/pools on inorganic soils; includes sloughs, potholes, seasonally flooded meadows, sedge marshes
		BU	Non-forested peatlands; includes shrub or open bogs, swamps, fens
		BW	Shrub-dominated wetlands; shrub swamps, shrub-dominated freshwater marshes, shrub carr, alder thicket on inorganic soils
		BXF	Freshwater, tree-dominated wetlands; includes freshwater swamp forests, seasonally flooded forests, wooded swamps on inorganic soils
		BXP	Forested peatlands; peatswamp forests

Systems	Classes	Types Symbols	Name of wetland types
Human-made Wetlands	Permanent	B1	Aquaculture (e.g., fish/shrimp) ponds
		B2	Ponds; includes farm ponds, stock ponds, small tanks; (generally below 8 ha)
		B6	Water storage areas; reservoirs/barrages/dams/impoundments (generally over 8 ha)
		B8	Wastewater treatment areas; sewage farms, settling ponds, oxidation basins, etc.
		B9	Canals and drainage channels, ditches
	Non-Permanent	B3	Irrigated land; includes irrigation channels and rice fields
		B4	Seasonally flooded agricultural land (including intensively managed or grazed wet meadow or pasture)
		B5	Salt exploitation sites; salt pans, salines, etc.
		B7	Excavations; gravel/brick/clay pits; borrow pits, mining pools
Reversible Wetlands		Brvc	Coastal polders and embankments
		Brvi	FCD and FCDI projects; flood protected inlands with embankments
		Brve	Environmentally degraded, but restorable wetlands

[Note 1:

BX – ‘B’ stands for Bangladesh, ‘X’ stands for corresponding X type of Ramsar wetland type

Example:

BA – ‘B’ stands for Bangladesh, ‘A’ stands for Ramsar Type A Wetland:

Permanent shallow marine waters in most cases less than six meters deep at low tide; includes sea bays and straits

B1 – ‘B’ stands for Bangladesh, ‘1’ stands for Ramsar Type I Wetland:

Aquaculture (e.g., fish/shrimp) ponds

Note 2:

Brvc – ‘B’ stands for Bangladesh, ‘rv’ stands for Reversible Wetlands, ‘c’ stands for Coastal Polders and embankments.

Brvi – ‘B’ stands for Bangladesh, ‘rv’ stands for Reversible Wetlands, ‘i’ stands for FCD and FCDI projects; flood protected inlands with embankments.

Brve – ‘B’ stands for Bangladesh, ‘rv’ stands for Reversible Wetlands, ‘e’ stands for environmentally degraded, but restorable wetlands.]

1.5 The Haor Region

The Haors are located in the Haor Region which consists of 7 districts of the northeast region known as the Haor Districts (Fig 1.1). They are:

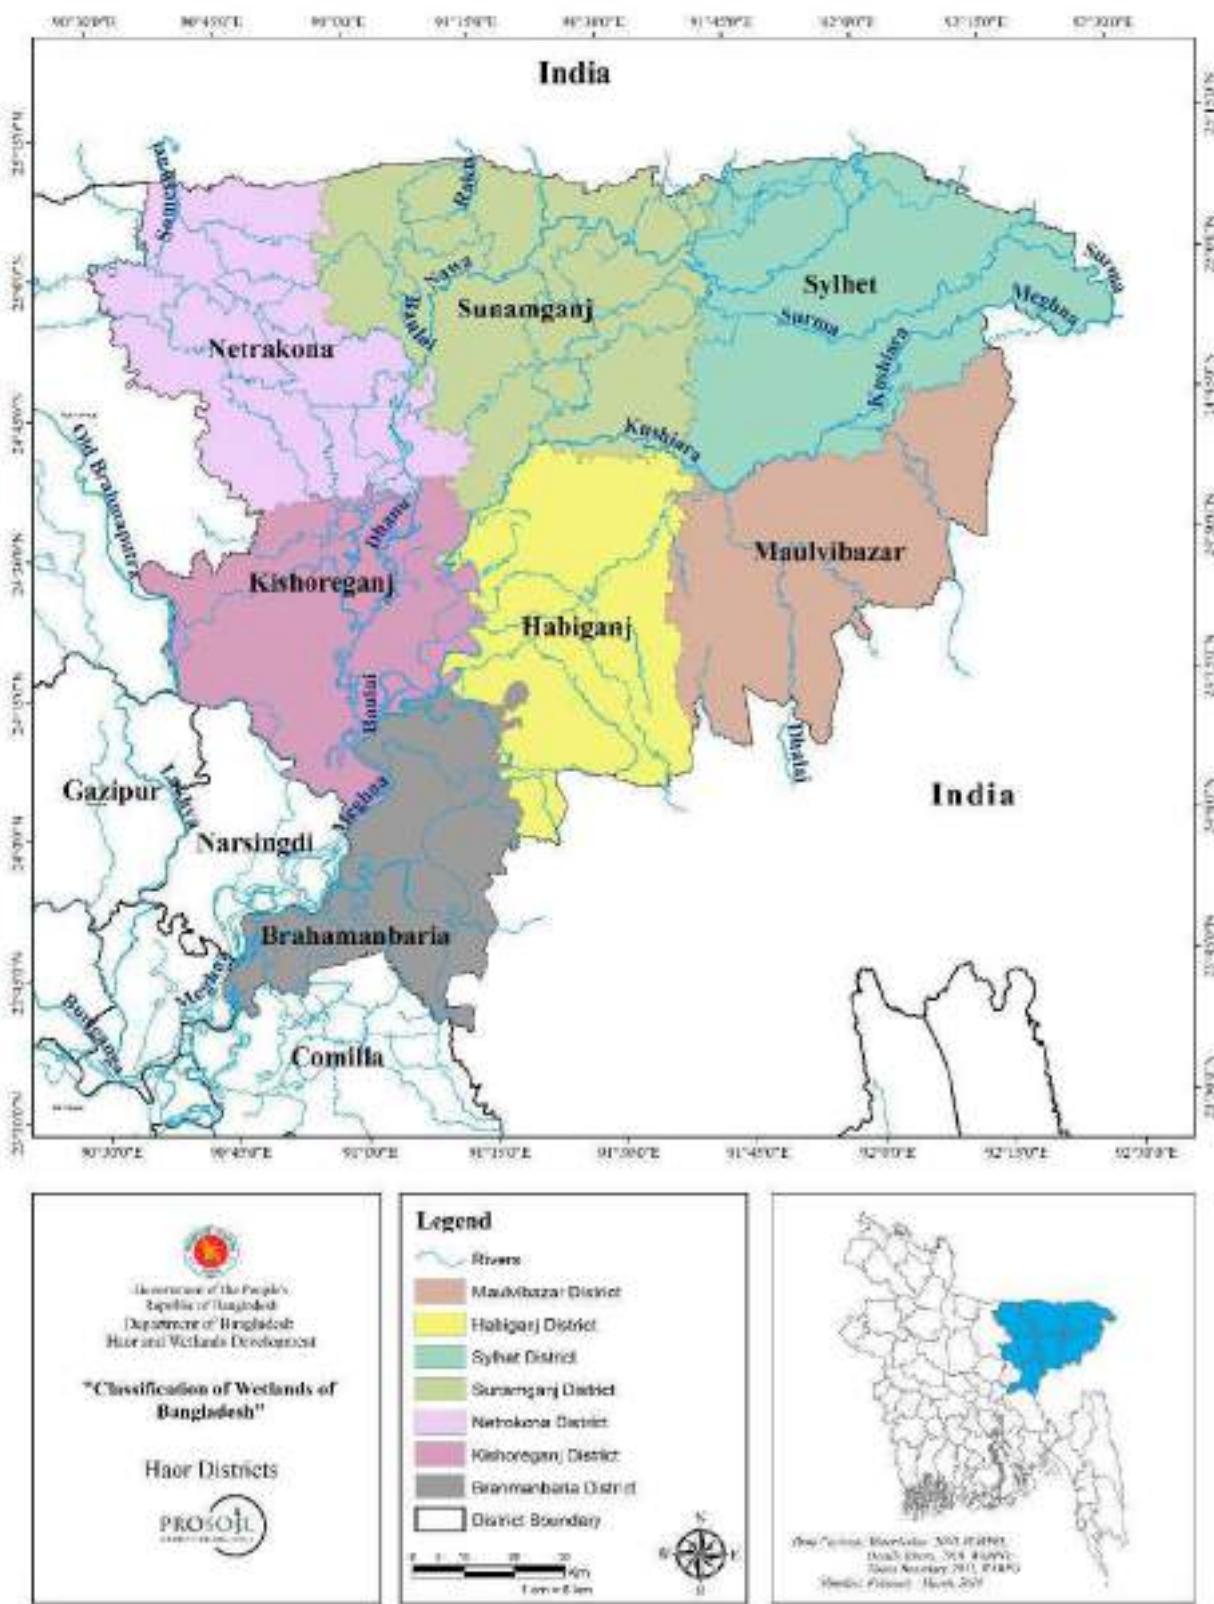

- Sunamganj
- Sylhet
- Habiganj
- Maulvibazar
- Netrakona
- Kishoreganj
- Brahmanbaria

A very brief description of the 7 Haor Districts is given below:

Sunamganj: Sunamganj is located in the Sylhet Division with the Sylhet District to its east, Habiganj District is to its south and Netrakona District to its west (Fig. 1.1). It has an area of 367,000 ha and a population of 2,443,000 (Census, 2011). The Surma River and Kushiyara River run through the district whilst Ratna River crisscrosses the district and beyond. The River Da'uka or Danuka also run through district Sunamganj. It has 11 Upazilas: Bishwambarpur, Chhatak, Derai, Dharmapasha, Dowarabazar, Jagannathpur, Jamalganj, Sulla, Sunamganj Sadar, Dakshin Sunamganj and Tahirpur. There are 95 Haors and numerous Beels in this districts. Sunamganj is a major source of freshwater fish. This district is famous for fishery business. Dekar, Kalikota, Naluar, Pagnar, Shanir, Tanguar Haor are some of the many Haors of Sunamganj District among which Tanguar Haor has been declared as Ramsar site.

Sylhet: Sylhet is the main town of the division, where the divisional headquarters as well as Sylhet district headquarters are located. It has an area of 349,000 ha and a population of 3,404,000 (Census, 2011). There are 13 Upazilas in Sylhet and they are Balaganj, Beani Bazar, Bishwanath, Companiganj, Fenchuganj, Golapganj, Gowainghat, Jaintiapur, Kanaighat, Osmani Nagar, Dakshin Surma, Sylhet Sadar and Zakiganj. Sylhet District is bordered by Khasia-Jainta Hill tracts of Indian Border area to the north, Maulvibazar district to the south, Kachhar and Karimganj districts of Assam (India) to the east, Sunamganj district to the west (Fig. 1.1). Its most famous natural tourist spot is Jaflong and it is also home to the grave of the Muslim saint, Hazrat Shah Jalal Yamani, located in Sylhet town. There are 105 Haors in this district. Boro Haor, Patharchuli Haor, Dhamrir Haor, Banaiya Haor are some of the largest Haors in this district.

Annexure 2: Haors of Bangladesh

Habiganj: Habiganj district is located in the south central part of Surma basin and in the north- eastern part of Bangladesh. Habiganj District is bordered by Sylhet and Sunamganj districts to the north, Tripura (Indian state) to the south, Maulvibazar district to the east, and Brahmanbaria and Kishoreganj districts to the west (Fig. 1.1). It has an area of 263,700 ha and a population of 2,059,000 (Census, 2011). There are 8 Upazilas in Habiganj and they are Ajmiriganj, Bahubal, Baniachong, Chunarughat, Habiganj Sadar, Lakhai, Madhabpur and Nabiganj Upazila. The rivers Borak, Kalni, Kushiyara, Khoay, Gopali, Ratna, Karongi, Katati, Sutang etc. run through Habiganj. There are only 14 Haors in this district among which Gungiajuri, Ikram-Sangar, Makalkandi Haors are of considerable sizes.

Maulvibazar: Maulvibazar district is located in the north- eastern borderline of Bangladesh and is bordered by Sylhet district to the north, Tripura (Indian State) is to the south, Assam and Tripura states of India are to the east, Habiganj district is to the west (Fig. 1.1). It has an area of 279,900 ha and a population of 1,902,000 (Census, 2011). They are 7 Upazilas in Maulvibazar and they are Barlekha, Kamalganj, Kulaura, Maulvibazar Sadar, Rajnagar, Sreemangal and Juri Upazila. The rivers Monu, Dholai, Sonai, Fanai, Gopala, Continala, Juri, Bilam etc. run through this district. It has only 3 Haors- Hail, Hakaluki and Kauadighi Haor. Hakaluki Haor is one of Bangladesh's biggest and one of Asia's largest Haor. It has also been declared as Ramsar Site. Lawachara National Park, Madhabkunda Falls are some of the famous tourist spots in this area.

Netrakona: Netrakona is a part of Mymensingh Division. It is situated in the northern part of Bangladesh, near the Meghalayan border (Fig 1.1). There are four main rivers in Netrakona and they are: Kangsha, Dhala, Magra, and Teorkhali. It has an area of 274,400 ha and a population of 2,229,642 (Census, 2011). There are 10 Upazilas in this district and they are Atpara, Barhatta, Durgapur, Khalijuri, Kalmakanda, Kendua, Madan, Mohanganj, Netrakona Sadar and Purbadhala Upazila. The economy of Netrakona is largely agrarian. Susang Durgapur, an Upazila of Netrakona, is one of the major sources of country's China-Clay used for ceramic products. It has 52 Haors and they provide wide varieties of fishes. Birishiri is a hill of white clay, situated in this district and is one of the most beautiful places of Bangladesh. Dingi Pota, Medar Beel, Talar are some of the major Haors of Netrakona.

Kishoreganj: Kishoreganj is a district in the central Bangladesh. It is a part of Dhaka Division. Kishoreganj is bordered by Mymensingh, Netrakona and a part of Sunamganj District to the north, Narsingdi district to the south, Brahmanbaria and Habiganj districts to the east, Gazipur and Mymensingh districts to the west (Fig. 1.1). It has an area of 273,100 ha and a population of 3,029,000 (Census, 2011). There are 13 Upazilas in Kishoreganj and they are Austagram, Bajitpur, Bhairab, Hossainpur, Itna, Karimganj, Katiadi, Kishoreganj Sadar, Kuliarchar, Mithamain, Nikli, Pakundia and Tarail Upazila. The rivers Old Brahmaputra, Meghna, Kalni, Dhanu, Ghorautra, Baurii, Narasunda and Piyain run through the district. There are 97 Haors in this district. Khunkhuni, Mithamain, Boro Haor are some of the major Haors of Kishoreganj.

Brahmanbaria: Brahmanbaria district is under Chittagong Division. It is bordered by Kishoreganj and Habiganj district to the north, Comilla district to the south, Habiganj district and Tripura (Indian State) to the east, The Meghna River and a part of Kishoreganj, Narayanganj and Narsingdi districts to the west (Fig. 1.1). It has an area of 192,700 ha and a population of 2,954,000 (Census, 2011). There are 9 Upazilas in Brahmanbaria and they are Akhaura, Ashuganj, Bijoynagar, Bancharampur, Brahmanbaria Sadar, Kasba, Nabinagar, Nasirnagar and Sarail. The rivers Meghna, Titas, Shalda, Hawra, Pagla, Putia, Sonai, Hawra, Ropa, Buri, Bizna, Balua, Bolak, Dholbanga etc. run through this district. There are 7 Haors in Brahmanbaria among which Dattakhola, Tikkar Par are the largest Haors in Brahmanbaria.

1.6 Haors

As mentioned earlier, there are 373 Haors among which 47 has been considered to be major Haors according to FAP 6 (1994) considering their size, economic and environmental importance. All the Haors have importance of some kind but some of them are identified for their national and international importance. Two Haors namely: Tanguar Haor and Hakaluki Haor have been declared as Ramsar Sites of International importance. The criteria for the designation of wetlands of International importance is given in Box 1.2.

Box 1.2 Ramsar Criteria for the Designation of Wetlands of International Importance

Group A of the criteria Sites containing representative, rare or unique wetland types		Criterion 1: A wetland should be considered internationally important if it contains a representative, rare, or unique example of a natural or near-natural wetland type found within the appropriate biogeographic region.
Group B of the criteria Sites of international importance for conserving biodiversity	Criteria based on species and ecological communities	<p>Criterion 2: A wetland should be considered internationally important if it supports vulnerable, endangered, or critically endangered species or threatened ecological communities.</p> <p>Criterion 3: A wetland should be considered internationally important if it supports populations of plant and/or animal species important for maintaining the biological diversity of a particular biogeographic region.</p> <p>Criterion 4: A wetland should be considered internationally important if it supports plant and/or animal species at a critical stage in their life cycles, or provides refuge during adverse conditions.</p>
	Specific criteria based on waterbirds	<p>Criterion 5: A wetland should be considered internationally important if it regularly supports 20,000 or more waterbirds.</p> <p>Criterion 6: A wetland should be considered internationally important if it regularly supports 1% of the individuals in a population of one species or subspecies of waterbird.</p>
	Specific criteria based on fish	<p>Criterion 7: A wetland should be considered internationally important if it supports a significant proportion of indigenous fish subspecies, species or families, life-history stages, species interactions and/or populations that are representative of wetland benefits and/ or values and thereby contributes to global biological diversity.</p> <p>Criterion 8: A wetland should be considered internationally important if it is an important source of food for fishes, spawning ground, nursery and/or migration path on which fish stocks, either within the wetland or elsewhere, depend</p>
	Specific criteria based on other taxa	Criterion 9: A wetland should be considered internationally important if it regularly supports 1% of the individuals in a population of one species or subspecies of wetland-dependent non-avian animal species

Source: Ramsar, 1971

Brief description of some Haors has been provided below:

- **Tanguar Haor:** Tanguar Haor is located in Dharampasha and Tahirpur Upazila of Sunamganj District. It has an area of 11700 ha and consists of 120 Beels. It was declared a Ramsar site - wetland of international importance in 2000. Due to overexploitation of its natural resources, the Government of Bangladesh declared it as an Ecologically Critical Area in 1999. The Haor plays an important role in fish production of the country as well as providing livelihood for over 40,000 people. It functions as a mother fishery. More than 140 species of freshwater fishes are available here. The more predominant among them are: ayir, gang magur, baim, tara, gutum, gulsha, tengra, titna, garia, beti, kakia etc. The freshwater wetland trees of this Haor include Hijal, karach, gulli, balua, ban tulsi, nalkhagra, etc. The haor is a sanctuary for the migratory birds. Every winter about 200 types of migratory birds visit this haor and make their temporary habitat here (IUCN, 2012).
- **Hakaluki Haor:** Hakaluki Haor is stretched over Maulvibazar and Sylhet Districts. It is one of the biggest Haors of Bangladesh and one of Asia's largest Haor. It has an area of approximately 21500 Ha (BHWDB, 2012). The haor is situated in Kulaura, Juri and Barlekha upazilla under Maulvibazar district and Fenchuganj and Golabganj Upazilas under Sylhet district. The Government declared Hakaluki Haor as an Ecologically Critical Area. It is a protected Ramsar site of International Importance for the conservation and sustainable utilization of wetlands. The Hakaluki Haor offers a marsh wetland ecological system. It is home of many kind of fishes, birds and animal. There are 107 species of fishes available here, according to IUCN report, 2008. But 75 species remain present day. Some species are: Chela, Dhela, Pabda, Lal chanda etc. People of this area are mainly fisher man. Hakaluki Haor is also home of many country bird and migratory birds. Every winter, tens and thousands of migratory birds of about 150 species from Siberian and other cold country flock to the Haors. Bright and Rose King-duck, Pati-duck, Bali Hash, Lenja, Chity, Sorali, Boikal, Nilshir Piyan, Pantamukhi, Pankouri, Buti-duck, China, Rangamuri, Black-duck, Peributhi, Chokachoki, Giria, Khonjona, Patari, Dolpipi, Water-hen, North-Giria, Dahuk, Patibatan, Common-chill, Cotton-Chill, Gergini, Cottontail, Pintail, Toughed Duck are some of the species of migratory birds (Talukdar et al., 2015).

- **Hail Haor:** Hail Haor is located in Maulvibazar Sadar, Sreemangal under Maulvibazar District. It has an area of 15100 ha. It is in between the Tarap and Banugach hill ranges in the southeast. It is a shallow permanent lake and supports a rich variety of Aquatic plants, resident and migratory birds. Some of the species are scarce in other regions of the country.

Baikka Beel: Baikka Beel is a 100 ha wetland sanctuary located in Hail Haor. It comprises of open water with emergent vegetation (mostly lotus), and a fringe of native swamp forest. The Beel is protected to conserve and restore fish and it supports about 90 species of fish. About 141 species of migratory birds use this place in the winter for resting and roosting. Fish Eagles, large flocks of ducks including up to 4,500 Fulvous Whistling-duck, great Spotted Eagle good numbers and diversity of shorebirds, marshland warblers and other birds visit the Beel in winter.

- **Kauadighi Haor:** It is situated in Rajnagar Upazila under Maulvibazar and Balaganj Upazila under Sylhet district. It has an area of 15200 ha. The Haor is very important for a wide variety of waterfowl. It provide attractive habitat for large numbers of shorebirds and is a breeding site for Whiskered Tern and Black-winged Stilts, species not previously seen breeding in Bangladesh. It was of regional importance as mother fishery but is now enclosed within the “Manu River Irrigation Project”.
- **Dekar Haor:** Dekar Haor is situated in Dakshin Sunamganj, Dowarabazar, and Sunamganj Sadar under Sunamganj district. It has an area of 25100 ha. It consists of a number of large shallow Beels with a considerable amount of floating and emergent aquatic vegetation, surrounded by rice fields. Kuri Beel differs from the others in being much deeper and being surrounded by steep grassy banks. The haor is of some value for a wide variety of wintering waterfowl, and also supports a small number of resident species. Around 30 species of birds visit the Haor in winter including the only Bar-headed Geese recorded during the surveys.

Chapter 2 Haors of Bangladesh

Haors are one of the most important “Inland Wetlands” of the country. According to the proposed wetland classification system of Bangladesh, Haors are classified as the Wetland type BP (Seasonal/intermittent freshwater lakes (over 8 ha); includes floodplain lakes) and the Beels within Haors are classified as BO (Permanent freshwater lakes (over 8 ha); includes large oxbow lakes). The complete list of all 373 Haors as identified in the “Master Plan of Haor Area”, 2012 is given below along with their location, area and maps. The following Table 2.1 shows district wise number of Haors and their areas. Haor system of Bangladesh is shown in Figure 2.1. Table 2.2 shows the District wise list of all 373 Haors of Bangladesh.

Table 2.1 Haor Area of Bangladesh

District	Total Area of the District (ha)	Haor Area (ha)	No. of Haors
Sunamganj	367,000	268,531	95
Sylhet	349,000	189,909	105
Habiganj	263,700	109,514	14
Maulvibazar	279,900	47,602	3
Netrakona	274,400	79,345	52
Kishoreganj	273,100	133,943	97
Brahmanbaria	192,700	29,616	7
Total	1,999,800	858,460	373

2.1 Haors of Sunamganj District

2.1 Haors of Sunamganj District

There are 11 Upazilas and 95 Haors in Sunamganj District. Among these Upazilas, Bishwambarpur does not have any Haors. Haors of the rest 10 Upazilas and their maps have been given below. Table 2.3 shows the number of Haors (Upazila wise) of Sunamganj District.

Table 2.3 Haors of Sunamganj District

Serial No.	Name of Upazila	Number of Haors
1	Bishwambarpur	-
2	Chhatak	11
3	Dakshin Sunamganj	10
4	Derai	11
5	Dharampasha	36

7	Jagannathpur	13
8	Jamalganj	10
9	Sulla	11
10	Sunamganj Sadar	6
11	Tahirpur	8
Total		95

It is to be noted that:

- Some Haors are stretched over more than one Upazila, sometimes over more than one district. While recording these Haors, they have been shown in all Upazilas, hence the apparent discrepancy is observed in the total number of Haors.
- In Sunamganj District, the following Haors are stretched over more than one Upazilas: Baram, Chaol, Dekar, Dhakua, Dhamai, Dhankuniar, Dubail, Gurmar, Huramondira, Jamaikata, Joal Bhanga, Kalnar, Lusni Beel, Naidar, Naluar, Pagnar, Sashkar, Shanghair, Shanir, Suktiar, Suraya Bibiyana and Tanguar Haor.
- Chayer, Doyalong, Gomrar, Goradoba, Kalikota, Shimultala- Jalla Haors are stretched over more than one district.

Figure 2.2 shows the perennial waterbodies (wetlands) of Sunamganj district. Figure 2.3 shows the Satellite Image Map of the wetlands of Sunamganj. Upazila wise list of Haors of Sunamganj has been presented in Tables 2.4 to Table 2.13 whereas Upazila wise maps of Haors have been presented in Figures 2.4 to Figure 2.13.
